

CRYSTAL MUSSEL ROPE

THE CRYSTAL MUSSEL ROPE IS AN ENVIRONMENT FRIENDLY, SINKING SPAT COLLECTION ROPE.

The Crystal Mussel Rope has been developed for effective spat settlement, high breaking load, abrasion resistance, and ease of handling. Crystal Mussel rope is free from heavy metals and other harmful substances. The sinking elements are made from 100% environment friendly silicate glass, the outer coating is made from Polyester and the core thread from Danline.

The shape of the sinking elements facilitates easy re-use of the materials. At the end of its lifespan the fibre coat and core thread will be mixed with organic matter, and can be used as fuel in a suitable type of energy-from-waste plant.

Today's seafood market rewards sustainable aquaculture practises.

Crystal Mussel Rope is a win-win product: Environmentally sound and cost-effective.

MUSSEL CRYSTAL ROPE

Applications
Core
Braided coat
Sinking material
Waste handling

SPECIFICATIONS

Shellfish culture
Danline
Polyester
Silicate glass
Re-use or recycling (sinking elements)
Energy recovery (rope coat and core)
